### Letter of Recommendation

**Moisés** has been studying in our institution for the academic year of 2014-15 – for the aircraft engineering BEng course. He has been showing lots of interest and passion in his study. He appeared to be a keen, serious and hardworking student, showing every sign of having real talent in understanding and solving (engineering and study) problems, along with meeting deadlines and standards for assigned works and responsibilities. He is good at investigating solutions to course works and project problems. He is enthusiastic in putting extra efforts on exploring and learning about new engineering development such as learning about new engineering IT packages, experimental tooling, and new (aerospace/aircraft) engineering topics. Overall, his academic performance is strong and thoughtful with top 5% rating among his group. He has put all of his efforts to achieve high grades and marks on his exams.

He has great potential in developing his career not only in engineering but also within academia to engage with research and/or teaching. During the course of engineering project (which I am responsible for) he has demonstrated his research, analytical and engineering skills investigating and sourcing solutions to the aircraft wing fluid-structure interaction problem. I found him strongly motivated and self-reliance, managing and leading on his work effectively. He is well organised and punctual on meetings and communications. There are windows of opportunities for him to learn and achieve further when he joins a postgraduate study – as I am delighted by the fact that he is planning to pursue a postgraduate course. I would strongly recommend him. I believe that Moisés is a very competent student that is not only learning but also can contribute to the course he is intending to be involved with.

He always shows great interest in learning and moving beyond his curricula. He reflects very well upon instructions and supervision and ready to put all resources to achieve a goal. Also, He is good at working with others and has an appropriate manner in respecting his lecturers, class mates and friends with great sense of trust and respect.

All in all, I think Moisés will have/has a very bright future, and I am sure he will be successful at any endeavour he takes from now and on. In short, I give him my highest recommendation for any further academic involvement.

*Dr. Bassam Rakhshani*  
Lecturer & Programme/Module Leader  
Dept. of Aeronautical/Aircraft Engineering  
University of the Highlands and Islands - Perth  
Crieff Road, Perth, PH1 2NX, UK
